CAPROV

PRIVATE-ASSET INTELLIGENCE PLATFORM

Turn private-asset information into trusted, actionable intelligence.

CAPROV brings documents, valuation evidence, ownership data and market workflows into one secure operating layer for private assets.

> **From source document to investment decision—with traceable evidence at every step.**

What it does

- **Builds Asset DNA:** extracts, structures and versions critical asset facts from uploaded documents.
- **Creates defensible marks:** produces valuations, risk views and forward projections with source provenance.
- **Supports capital-markets workflows:** manages portfolios, listings, trading, settlement, collateral, lending and tokenization.
- **Preserves trust:** records audit trails and content-hashed intelligence snapshots; Ethereum Sepolia anchors are available for provenance workflows.

Who it is for

Asset managers, private-market investors, lenders, operators and compliance teams that need a clearer, more reliable view of complex private assets.

Why CAPROV

CAPROV replaces fragmented files and opaque handoffs with a shared, evidence-backed source of truth—helping teams move faster while keeping decisions explainable and auditable.
