

VARA TECHNOLOGY

BLOCKCHAIN CENTER OF EXCELLENCE

Building trusted digital ecosystems through enterprise blockchain, tokenization, provenance and verifiable data.

Permissioned Blockchain | Public / EVM Networks | Tokenization | Data Provenance | Digital Trust | Smart Contracts

PROVEN ENTERPRISE BLOCKCHAIN SOLUTIONS

TRADE FINANCE

TATA STEEL

Payment advice & approval workflows

Processes SAP-originated import Payment Advice for Tata Steel Accounts through Maker-Checker approvals, SWIFT routing or digitally signed PDFs emailed to non-SWIFT banks.

BLOCKCHAIN VALUE

Immutable approvals, bank clarifications and confirmations enable end-to-end audit traceability.

React.js | Golang (Gin) | Hyperledger Fabric

TUBESNEXT

TATA STEEL

Tube commerce, provenance & quality certificates

Manages steel tube orders and deliveries using SAP transaction data. Quality certificates generated from blockchain records are digitally approved before issuance.

BLOCKCHAIN VALUE

Tamper-resistant transaction records support provenance, certificate traceability and authenticity.

React.js | Golang (Gin) | Hyperledger Fabric

CERTCHECK

Verifiable digital credentials

Issues and verifies institutional certificates. Data from the issuer's system is serialized and cryptographically fingerprinted, with the hash stored on-chain.

BLOCKCHAIN VALUE

On-chain fingerprints enable certificate authenticity verification, tamper detection and integrity checks.

React + Next.js | NestJS | Hyperledger Fabric

INVENIAM IO

Private-market data provenance

Ingests, structures and validates private-market asset data and source documents, retaining a golden copy with permissioned access and workflow-based processing.

BLOCKCHAIN VALUE

Blockchain-anchored hashes verify integrity and provenance while underlying source data stays off-chain.

Angular | NestJS | Public Blockchains

FROM TRUSTED RECORDS TO TOKENIZED ECONOMIES

Blockchain capabilities spanning public infrastructure, digital assets, AI-enabled finance and verifiable audit.

ANNAPURNACHAIN

Public Distribution System (PDS)

Supports beneficiary validation and ration-distribution transactions, including identification and handling of duplicate or ghost beneficiaries across PDS workflows.

BLOCKCHAIN VALUE

Permissioned records of beneficiary and PDS events provide provenance and tamper-evident auditability.

React + Next.js

NestJS

Hyperledger Fabric

BHARAT BHUMICHAIN

Land records & property transactions

Digitizes, validates and registers land and property records, supporting ownership, transfers and property transaction workflows on a permissioned blockchain.

BLOCKCHAIN VALUE

Tokenized land assets and immutable ownership events enable traceable, tamper-evident property provenance.

React + Next.js

NestJS

Hyperledger Fabric

CAPROV

Tokenized private capital marketplace

Enables private assets to be AI-valued, tokenized and listed for investment and trading, with support for fractional ownership and collateralization.

BLOCKCHAIN VALUE

On-chain issuance, ownership transfers and collateralization create transparent, traceable asset records.

React + Next.js

NestJS

Public Blockchain (EVM)

LEDGERRECON

AI reconciliation & verifiable audit

Uses AI-driven reconciliation to identify and resolve transaction mismatches across financial records, then generates final reconciliation status and audit reports.

BLOCKCHAIN VALUE

On-chain fingerprints of final status and reports provide tamper-evident auditability and integrity verification.

React + Next.js

NestJS

Hyperledger Besu

BLOCKCHAIN CoE CAPABILITIES

ENTERPRISE BLOCKCHAIN

Hyperledger Fabric & Besu
Permissioned networks
Smart contracts

WEB3 & TOKENIZATION

EVM / public blockchains
Asset tokenization
Fractional ownership & digital assets

TRUST & PROVENANCE

Cryptographic anchoring
Digital certificates & provenance
Tamper detection

ENTERPRISE INTEGRATION

SAP, API & workflow integration
Maker-Checker workflows
AI + blockchain
