

Pulse

The Origin of **Pulse**

Launched in 2016, Pulse was built to solve a critical gap: while customer data evolves constantly, global business data remained fragmented, outdated, and underutilised. Pulse integrates public, private, and alternative data to power data-driven financial decisions and journeys, enabling access to real-time insights.

With a diverse, verified data pool of **7 million+ SMEs**, and a suite of powerful SaaS tools, Pulse helps stakeholders unlock value, scale and automation with confidence. Today, Pulse operates as a leading data and SaaS company with a **100+ member team across the UK and India**.

Our mission

Pulse aims to revolutionise how financial services are consumed and how they empower decision-making across the board, powered by AI, machine learning and real-time data. Pulse strives to provide infallible value to its customers through a plethora of stellar solutions designed to foster growth, transparency, efficiency and scale.

Pulse aims to empower all its stakeholders through its potent ULI, layered modular solutions and API-first approach. Pulse is poised to offer embedded finance and lending solutions, creating an interoperable financial ecosystem built on trust, security, and sustainability.

Vision

Pulse's vision for the future involves a **combination of technology and innovation**. From cutting-edge layered solutions and building an intuitive **Unified Lending Interface (ULI)**, to utilising **embedded finance** to drive powerful solutions for banks, lenders, accountants, advisors and businesses, Pulse offers modular, API-first solutions for those who would like to leverage the confluence of AI, machine learning, and real-time data to unlock exponential growth, scale and automation.

What problem are we solving?

Fragmented Systems and Outdated Infrastructure

A tangled web of legacy tech

The UK's credit system is still built on outdated, disconnected technology that makes scaling and innovation painfully slow.

Silos breed fragility

One-off integrations between lenders and introducers take months, cost a fortune, and break easily.

Data locked away

Vital credit data sits in scattered systems slowing decisions, extending timelines, and frustrating everyone involved.

Limited Visibility and Inefficient Data Use

Flying blind on risk

Lenders rarely see the full picture of a borrower's exposure, creating hidden risks and over-lending.

Static models in a dynamic world

Credit models built on outdated data miss real-time signals that could prevent bad loans.

Transparency gaps slow deals

Introducers can't see live affordability checks or loan progress, eroding trust and killing momentum.

Cumbersome Processes and Compliance Headaches

Manual, messy, and mistake-prone

Too many teams still shuffle CSVs and batch files - wasting time and inviting compliance risk.

Regulatory friction everywhere

Fragmented reporting makes oversight reactive instead of proactive, holding back innovation.

Compliance at the cost of growth

Redundant checks drain resources that could go into better products and faster lending.

Poor Introducer and Borrower Experience

Introducers stuck in the slow lane

Re-keying data and chasing updates slows everything down and frustrates clients.

Borrowers left in the dark

Inconsistent, slow decisions create confusion and distrust.

Data-sharing concerns stall progress

Weak consent systems make borrowers hesitant to share information, limiting access to personalised credit options.

Innovation Roadblocks and Market Stagnation

Embedded finance at a standstill

Disconnected systems block the seamless, real-time credit experiences modern customers expect.

Integration fatigue

Every new partnership demands custom engineering, turning agility into chaos.

Trust deficit

Without standardisation, collaboration between lenders, introducers, and regulators is fragile at best.

SMEs Left Behind

Small businesses, big barriers

Traditional credit systems are built for large, established players, leaving SMEs out in the cold.

Hard to prove creditworthiness

Fragmented data and slow processes make it nearly impossible for small firms to access the funding they deserve.

Alternate Data: A Missed Opportunity

A richer picture ignored

Cash flow, invoices, utility bills etc. all-powerful signals of financial health are often overlooked.

Innovation blocked by inertia

Without alternate data, decisions stay conservative, slow, and exclusionary. The result? Underserved borrowers and untapped markets.

Solutions We Deliver

Solving the Business Data Challenge

Pulse's ULI: One Platform One View

Unified Lending Interface (ULI): The Infrastructure of Modern Lending

Pulse's ULI is a distributed interoperability framework that unifies the entire lending ecosystem — connecting businesses, capital providers, introducers / DSAs, and embedded finance platforms through a single, standardised interface.

At its core, ULI integrates:

Diverse Data Sources:

Seamlessly ingests data from accounting packages, ecommerce platforms, B2B marketplaces, banks, and alternative lenders.

Decision Engine:

Powered by real-time analytics and AI, it transforms raw data into instantaneous lending decisions.

Capital Providers and Lenders:

Banks, credit funds, debt capital markets, and alternative lenders are connected on one platform, enabling streamlined capital flow.

<3m in

Application time

Streamlined onboarding cuts application delays, creating faster starts and smoother borrower experiences.

<45sec

Decision time

Real-time intelligence enables instant credit decisions, turning complexity into speed and confidence.

Core pillars of ULI include:

1 Standardised data models for consistent loan processing.

2 Event-driven architecture for real-time credit decisions and risk monitoring.

3 Cross-lender data aggregation for accurate accurate borrower risk insights.

4 Modular, customisable APIs to adapt to regulations.

5 User-focused consent for transparent, trusted data sharing.

With **ULI**, Pulse is architecting the future of credit where decisions are instant, risk is managed holistically, and capital flows without friction across the ecosystem.

Loan Origination System (LOS)

Pulse Loan Origination System (LOS) automates and accelerates the loan journey, streamlining data access and workflows for faster, compliant decisions. It reduces manual effort, cuts turnaround times, and enhances scalability, empowering lenders to deliver capital with greater speed, precision, and confidence.

Key Benefits:

- Application time in under **3 minutes**
- Flexibility of customisable loan products
- Cost and time saving workflows

- Real-time decisions
- Fast, efficient, and compliant loan processing
- Easy integration via APIs, go live in **4 weeks**
- Optimised portal journey for **DSAs** with low tech capabilities.

Loan Management System (LMS)

Pulse Loan Management System (LMS) simplifies loan repayment management by automating overdue payment recovery, default handling, and compliance with repayment terms.

It streamlines collections, reduces financial risk, and improves recovery rates, enabling lenders to manage portfolios efficiently and maintain healthy cash flow with minimal effort.

Key features:

- **360° Communication Integration:** Enables seamless, multi-channel engagement for coordinated collections.
- **Advanced Reporting:** Robust analytics to monitor and enhance collections performance, ensuring regulatory reporting for legal compliance and transparency.

Core aspects of Collections:

1. Delinquent Loans Management
2. Overdue Loan Management
3. Automated Client Notifications
4. Structured Debt Recovery
5. Legal Actions & Defaults
6. Data-Driven Reporting
7. Regulatory Compliance

Einstein aiDeal – Automated Underwriting System

In conclusion, **Einstein aiDeal** maximises efficiency, reduces dependency on manual processes, and delivers swift underwriting decisions.

Einstein aiDeal:

AI- Powered Underwriting at Scale

Einstein aiDeal is the pinnacle of Pulse's intelligent decisioning engines designed to transform underwriting by automating high volumes of loan decisions with exceptional speed and accuracy. Powered by advanced artificial intelligence, aiDeal adapts to bespoke lending criteria, giving lenders full control while enabling scalable automation. It represents the future of underwriting, reducing manual intervention and delivering robust, data-driven decisions at scale.

Trained on

360 B+

data points

with a monthly increase of

180 M+

in recent years

What Makes Einstein aiDeal Powerful:

Customisable Decision Logic

Lenders retain full control by configuring credit policies, risk thresholds, and eligibility criteria to align with their strategy and regulatory requirements.

Real-Time, High-Volume Processing

Designed to process thousands of applications concurrently, supporting high-throughput digital channels and embedded finance journeys.

Embedded Fraud Controls

Actively identifies and filters high-risk applications using historical behavioural data, rule-based checks, and early warning indicators.

Integrated Data Intelligence

Leverages Pulse's ecosystem data alongside lender-sourced datasets to generate deeper borrower insights and more accurate, context-aware decisions.

White-Label Deployment

Easily deployed under a lender's own brand, enabling seamless integration within existing platforms and customer experiences.

Operational Efficiency at Scale

Significantly reduces cost-to-serve and reliance on manual underwriting teams, while improving speed, consistency, and compliance across credit decisions.

Stepping Stone to Embedded Finance

Platforms can launch embedded credit instantly, without the cost or time of building from scratch. Removes the complexity of underwriting: handling models, decision logic, and risk at scale.

Einstein aiDeal is not just a product, it's core infrastructure for next-gen credit delivery. Designed for speed. Built for scale. Proven in market. market.

Business Insights by **Pulse** : Turning Data into Action

A platform built for **Businesses, Banks, Lenders and Accountants** who want to effortlessly access business data and use it to transform how they manage and serve their customers more effectively.

Open Banking & Open Accounting:

Pulse has established itself as the market leader in Open Banking and Open Accounting coverage, seamlessly integrated with the world's top platforms including Xero, QuickBooks, Sage, and Plaid.

Data becomes transformative when it moves with purpose —
Pulse is here to make that happen.

And at the core of that flow are powerful capabilities designed to turn raw data into data into real decisions:

aiPredict

This AI tool analyzes data to forecast cash flow, enabling sharper predictions. Accurate forecasting boosts risk management and fuels strategic growth.

DebtorIQ

Identify payment trends, anticipate cash shortfalls, and prompt timely collections. Use public data and payment behaviors to gauge debtor risk and enhance financial planning for smarter credit decisions.

White-Labelled Solutions

Pulse is customisable and scales effortlessly to meet your customers' needs. It integrates seamlessly with your brand for quick deployment, delivering real value while showcasing your unique proposition.

Business Snapshot

Our portal provides businesses with instant access to crucial real-time insights and analytics.

Business Goals

Set and track business goals, monitor progress in real-time, and swiftly spot opportunities and challenges.

Alerts and Prompts

Our AI model continuously analyses the data to identify key event triggers and prompt an action.

Key business updates

- Action** You have missed a payment for invoice (enter invoice number xxxx) for [more](#)
- Action** Your sales have dropped 12% this quarter
- Action** You have missed your loan payment to Funding Circle
- Review** ABC Limited has just taken out a personal dividend of £55k
- Review** Your next payment on your Barclays term loan is due on Friday

aiPredict

aiPredict is an AI driven forecasting tool to help businesses plan for future. It has the ability to leverage historical information to project 12-month Balance Sheet, P&L and Cashflow and create multiple scenarios.

It is designed to meet this need, offering several key features that set it apart from traditional financial tools and other competitors in the market. Here's why it is a game changing product:

Real-Time Visibility into Cash Flow

Benefit: Quick decision-making to address liquidity issues before they escalate.

Cash Flow Analysis

Loan offer (New loan)

Amount: £40,000
Term: 24 months
Interest: 24% (Variable)

Cash Balance

Intelligence

Accurate Forecasting & Scenario Planning

Journal entries forecasted independently with algorithms auto-selected and weighted, enabling multiple models to work together for more reliable projections.

Data

Deep Industry Benchmarking

Powered by 600,000+ accounting integrations and 360 billion+ of financial data points, delivering sharper insights into UK industry trends.

Operations

Seamless Integration

Connects directly with accounting and bank systems to save time and reduce manual errors.

Real-Time Loan Offers

Embedded loan marketplace showcasing showcasing tailored, instant offers directly within the platform.

Early Risk Indicators

Helps spot potential cash flow pressures in advance, so corrective action can be taken early.

Scalable Growth

Supports both small and large businesses for businesses for consistent cash flow management.

DebtorIQ

DebtorIQ tool helps business owners track and analyse customer and supplier trends, such as monthly billing, credit notes, and payment timelines. It allows users to identify changes in customer profiles early, enabling effective risk management, in short, it offers comprehensive insights to manage debtor performance and make informed decisions.

Comprehensive Invoicing and Receivables Management

Benefit: Faster collections, reduced Days Sales Outstanding (DSO), and improved cash flow.

Our Reviews

Trusted by lenders, banks, and businesses alike, Pulse drives real-time financial intelligence and powers the future of lending.

“

What they are saying

Valuable insight of overall business performance. Truth might not always be pleasant, but it is important to have at hand hand reports such as the one generated by by Pulse, because it can help to steer decisions into right direction, towards brighter future.

Mirko Didara

”

A great business tool that gives me all the information I need to assess my business performance in an easy-to-understand format

Caryl Gibson

”

This is a great tool that provides a snapshot of how our company is performing over a 12-month period. While you can get this data from Sage from Sage yourself, it means dropping data into spreadsheets and collating collating historical data which is all too time-consuming. I've been using using Pulse for the last year or so and it's something I would happily pay for happily pay for but being free is fantastic.

Robert Hiley

”

Very useful tool for a small business like ours. Offers quick insights and a good overview without having to run out reports manually. Extremely handy for a busy business owner

Paul

”

Total Revenue – Split by Categories

Revenue Certainty

Revenue Classification and Predictability:

- Our revenue model is structured to provide strong visibility and sustainability. **Secured Revenue** represents income backed by **signed agreements**, with **weekly / monthly billings linked directly to these contracts**, ensuring stability and predictability.
- Unsecured Revenue (Probability >75%)** reflects income streams where **agreement renewals are highly probable**, supported by strong client relationships and consistent performance — giving us high confidence in continued renewals.
- Unsecured Revenue (Probability 25–75%)** primarily pertains to **Performance Servicing Fees**, where revenues are linked to ongoing performance of Servicing Business lines. This revenue has been growing MOM. However, for prudent forecasting, these revenues are conservatively categorized within the **25–75% probability range**.
- Unsecured Revenue (Probability < 25%) reflects ongoing POCs with high likelihood of executing contracts.

Portfolio Analysis (AUM Growth)

Portfolio Performance Summary

- Portfolio growth is driven by a well-balanced loan mix and disciplined origination strategy.
- The **Weighted Average Life (WAL)** across our Portfolio exceeds 27 months.
- This optimized loan tenure structure directly contributes to a growing **Portfolio**, which has been expanding at a **38.3% CAGR**.
- Simultaneously, our **Origination Volumes** have been growing at a healthy **58.4% CAGR**, underscoring consistent demand and efficient credit deployment across segments.
